Overview

We aim to convert heavy commercial transport to zero-carbon at a competitive cost using the best EV technologies available.

Our focus is on minimizing technological risks and maximizing competitiveness of our customers.

To be Changed:

Proposed

Overview :

We are building India's integrated electric freight ecosystem—combining advanced electric vehicles, battery swapping, charging infrastructure, and intelligent support services. Our solutions help enterprises transition to cleaner transport while improving operational efficiency, reducing total cost of ownership, and minimizing technology risk.

Existing

High Up-front costs

EVs require 3X the capital investment compared to a diesel truck

Downtime

EVs have 6X higher refuelling down-time compared to diesel truck

Range Anxiety

Insufficient and time-consuming charging infrastructure hinders fleet operation and scalability

Unbundling

Separating ownership of e-Truck and battery; significantly reducing capital investment

Battery Swap

5-minute battery swapping minimizes downtime, keeping operations efficient

Smart Scheduling

Fleet management software optimizes battery swapping and charging schedule enabling high-efficiency operations

Proposed

Challenges	EIM Solution
Reduce Capital Investment Electric trucks often require substantially higher upfront investment than conventional diesel vehicles.	Battery-as-a-Service Lower acquisition costs by separating battery ownership from the vehicle.
Charging Downtime Evs have 6X higher refuelling down-time compared to diesel truck	Battery Swapping Automated Battery Swapping gets trucks back on the road in minutes, maximizing fleet productivity.
Route Reliability Limited charging infrastructure and extended charging times can disrupt fleet operations and constrain business growth.	Smart Energy Management Intelligently coordinates battery swapping, charging, and fleet deployment to maximize uptime, optimize energy availability, and keep freight moving with confidence.

Existing

Offerings

State-of-the-Art 2nd generation
Intelligent E-Tractor

Battery pack on pay per-use / fixed-cost
plans with lifetime warranty

Convenient Swapping cum Charging
infrastructure

Smart Swapping/Charging scheduling
services for zero waiting time

Automated battery pack swap in 5
minutes

100% Green Energy to ensure truly
sustainable fleet operations

Proposed

New visuals from brand library to be added :

Next-Generation Electric Tractor

Engineered for high-performance heavy-duty freight.

Integrated Battery Swapping & Charging Network

Reliable energy infrastructure designed for uninterrupted operations.

Rapid Automated Battery Swapping

Automated battery exchange in minutes to maximize fleet uptime.

Battery-as-a-Service

Flexible subscription model that lowers upfront investment and simplifies ownership.

Intelligent Energy Management

Smart software optimizes battery allocation, charging, and fleet scheduling for greater operational efficiency.

Powered by Renewable Energy

Supporting cleaner, lower-carbon logistics through sustainable energy infrastructure.

Existing

Swapping Station

Fully automated battery swapping. Capable of charging multiple battery packs simultaneously while also charging vehicles directly.

2nd Gen. e-Tractor

Truck is equipped with swappable battery.

Proposed

- Visuals to be changed

Automated Battery Swapping & Charging Hub

- A fully automated energy hub that enables rapid battery swapping while simultaneously charging multiple battery packs and electric vehicle.

Next-Generation Electric Tractor

- Purpose-built for heavy-duty commercial applications, the EIM electric tractor features an advanced swappable battery platform that delivers faster turnaround, greater operational flexibility, and seamless integration with EIM's energy ecosystem.

Existing

Charging Network

Future Ready Charging Networks Deployment Roadmap

2025

Introduce 22 Swapping Stations at major logistics hubs throughout India, each capable of servicing 100 e-trucks per day.

2027

Target the deployment of 45 additional stations in sectors like cement, steel, and mining, enhancing the overall charging network for electric vehicles.

J M Baxi Group- more than 100-year Legacy

Founded in 1916, J M Baxi Group has spent more than a century at the heart of India's maritime and trade landscape. What began on the waterfront has grown into a unified platform spanning ports, logistics, marine services, and supporting supply-chain infrastructure – all built on deep maritime expertise.

Across the port-centric ecosystem, our focus remains the same: help India move cargo, commerce, and communities forward.

EIM

“
By deploying **EIM vehicles in NCR region**, not only do I feel proud to be contributing to a **Greener Environment**, but I also feel richer each time my vehicle enters into Delhi, as my EV trucks are exempted from paying **Rs 4000/- NGT Tax** per trip imposed by Delhi Govt for Diesel trucks.”

Gurjeet Singh Bhatia
AVP- Transport Operations
J M Baxi, The Port & Logistics

EIM

“
As one of the early users of **EIM vehicles at JNPT Port at Navi Mumbai**, I'm amazed at the way EIM has created the charging infra in the JNPT eco-system comprising of multiple Swapping-cum-Charging stations - in terms of speed & scale. Looking at current oil prices, I feel lucky **I switched to EV early.**”
